*Executive director of the Illinois MakerLab*

## The 3D Printing Revolution

In this presentation, I propose that 3D Printing will revolutionize the way in which physical products are made, sold, and consumed in much the same way that the Internet revolutionized digital products like music, text, and video. The presentation begins with an overview of 3D Printing and its current applications. I will then explain its revolutionary potential, offer a typology of different types of 3D printed objects. I conclude the presentation by providing an overview of the Illinois MakerLab, the world's first 3D Printing lab in a business school and offering thoughts about the future of this revolutionary new technology.
